

BUILD A TIP CALCULATOR

Calculate the tip based on the bill amount. You have to design a HTML page.

Below are the fields basically needed in the web page:

1. A text box to enter the Bill Amount with its label
2. A list box for Service Rating that contains values from 1 to 10 with label.
You will use this to rate the service of the bearer from 1 to 10.
3. A text box (with its label) to enter the number of people who are sharing the bill.
4. Calculate button where processing happens
5. A text box (with label) to display the Tip amount
6. A text box (with label) to display the share of a person

Calculate the tip amount by using the Service Rating & Bill Amount and display in the respective text box. Calculate the per-share amount of a person based on the number of people & display in respective text box. Also do necessary validations as needed to accept only valid data entered.

Tools to be used: HTML, CSS & JavaScript

Note:

1. Follow the standard process
2. Make your own UI design
3. Have as much usability features as needed
4. Do beautification of your choice
5. You may add any other flavors to this application as you need
